

Executive Dashboard Training | Decision-Making Playbook

How to move from a red executive page to a prioritized action plan using filters, drilldowns, and KPI interpretation.

Document purpose

This guide is designed for realistic end-user enablement on the Executive Performance Dashboard in the NovaCarta EMEA dummy dataset. It explains what each area of the dashboard contains, how to filter and drill into data, how the executive KPIs are calculated, and how to turn those signals into actions.

Reference quarter used for worked examples: **FY2025 Q4**. In that slice, total revenue is **€3.70B**, target revenue is **€6.08B**, weighted market share is **19.49%**, and weighted YoY growth is **19.62%**.

1. First five clicks: a disciplined start to analysis

1. Set the fiscal quarter.
2. Read the KPI strip.
3. Scan the brand chart.
4. Read the market share trend.
5. Read the country heat table only after the portfolio story is clear.

Starting with country first can lead to random hunting. Starting with the portfolio cards and brand chart preserves executive discipline: first size the problem, then isolate the drivers, then localize ownership.

2. Decision pattern: when one brand drives most of the miss

In FY2025 Q4, **LUNARA** is the biggest revenue brand at €1.53B, but it is only at **47.5%** of target. This makes it the largest single contributor to the quarter gap.

1. Click the LUNARA bar.
2. Confirm how the KPI strip changes.
3. Open a brand drillthrough page.
4. Decide whether the response is commercial, access, or execution focused.

When one brand contributes a disproportionate share of the variance, do not spread management attention across the entire portfolio. First drill into that brand.

3. Decision pattern: stable share but weak target attainment

The current slice shows **19.49%** weighted market share with **60.8%** attainment to target. When share remains broadly stable while attainment falls sharply, leadership should test whether targets were stretched or whether mix shifted toward lower-value channels or markets.

Questions to ask: Is the miss concentrated in a few brands or broad-based? Are large markets all below target, or only one cluster? Do operational KPIs indicate poor execution, or does execution look acceptable relative to plan?

Treat this pattern as a prioritization problem, not automatically as a market share emergency. Move next to the scorecard and heat table.

4. Decision pattern: use the scorecard to identify the lever

Executive KPI Scorecard | FY2025 Q4

	KPI Name	Value	Target	Attainment
KPI001	Field Day %	45.2	75.0	60%
KPI002	Target Coverage Rate	77.9	80.0	97%
KPI006	Digital Channel Coverage	51.2	50.0	102%
KPI008	Event Follow-up Rate	59.3	60.0	99%
KPI012	Interaction Frequency TC1	5.2	6.0	87%
KPI015	Multi-Channel Engagemer	2.3	7.5	31%

Digital Channel Coverage is slightly above target, Target Coverage and Event Follow-up are close to target, but Multi-Channel Engagement Score is severely under target. This is a classic signal that the organization is achieving reach but not enough coordinated depth across channels.

1. Look for KPIs that are green.
2. Look for KPIs that are red but strategically important.
3. Compare one red KPI with one near-target KPI to determine whether the next action should increase volume or improve orchestration.

Increase multichannel choreography, revise field-force follow-up after events, or redesign high-priority account plans instead of asking teams to “just do more calls”.

5. Decision pattern: prioritize markets with both size and underperformance

Leadership should not chase the reddest color alone. The correct approach is to combine color with revenue contribution. Germany, France, the United Kingdom, Italy, and Spain are all around 60% of target and together represent the bulk of revenue in the quarter.

- 1. Sort the heat table by Revenue descending.
- 2. Select the first large red or orange market.
- 3. Check how the brand chart changes under that country filter.
- 4. Compare the country scorecard with the portfolio scorecard.
- 5. Escalate only after confirming whether the same issue repeats across multiple major markets.

By the end of the review, the user should be able to name the top two brands driving the miss, the top three markets to prioritize, and the two KPI levers most likely to improve the next quarter.
