

Executive Dashboard Training | KPI Definitions & Calculations

The KPI logic behind the executive cards, scorecard, and heat table, with dataset-specific formulas and worked examples.

KPI Strip

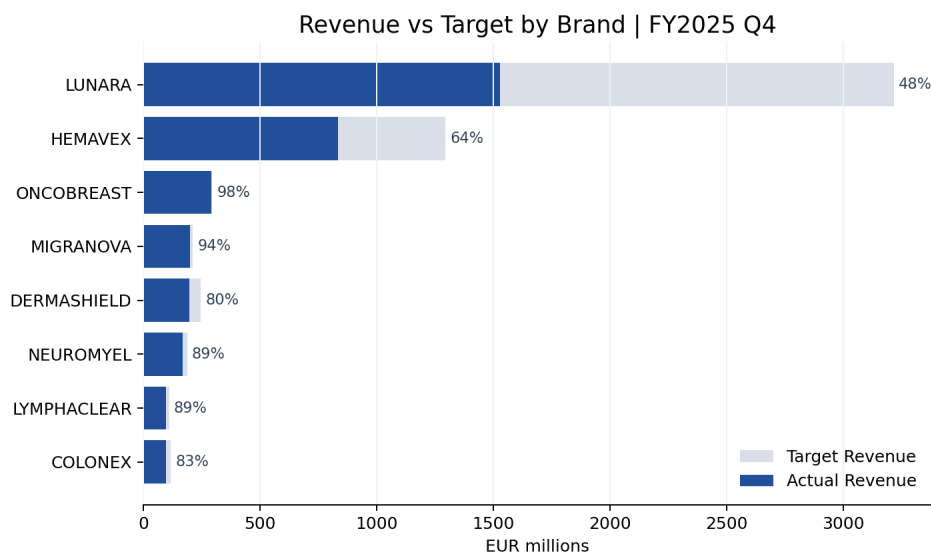

Revenue €3.70B FY2025 Q4 actual	% vs Target 60.8% vs €6.08B target	Market Share 19.5% weighted by revenue	YoY Growth +19.6% weighted by revenue
--	---	---	--

Document purpose

This guide is designed for realistic end-user enablement on the Executive Performance Dashboard in the NovaCarta EMEA dummy dataset. It explains what each area of the dashboard contains, how to filter and drill into data, how the executive KPIs are calculated, and how to turn those signals into actions.

Reference quarter used for worked examples: **FY2025 Q4**. In that slice, total revenue is **€3.70B**, target revenue is **€6.08B**, weighted market share is **19.49%**, and weighted YoY growth is **19.62%**.

1. Revenue, target revenue, and revenue variance

Revenue is the sum of **FACT_Sales[net_revenue_eur]** in the active filter context. Target Revenue is the sum of **FACT_Targets[target_value]** where **target_type = REVENUE_TARGET** in the same context.

Revenue = SUM(FACT_Sales[net_revenue_eur])

Revenue Target = CALCULATE(SUM(FACT_Targets[target_value]), FACT_Targets[target_type] = "REVENUE_TARGET")

Revenue Variance = [Revenue] - [Revenue Target]

Worked example: Revenue = €3.70B; Revenue Target = €6.08B; Revenue Variance = €-2.38B.

2. Revenue % vs Target

KPI Strip			
Revenue	% vs Target	Market Share	YoY Growth
€3.70B	60.8%	19.5%	+19.6%
FY2025 Q4 actual	vs €6.08B target	weighted by revenue	weighted by revenue

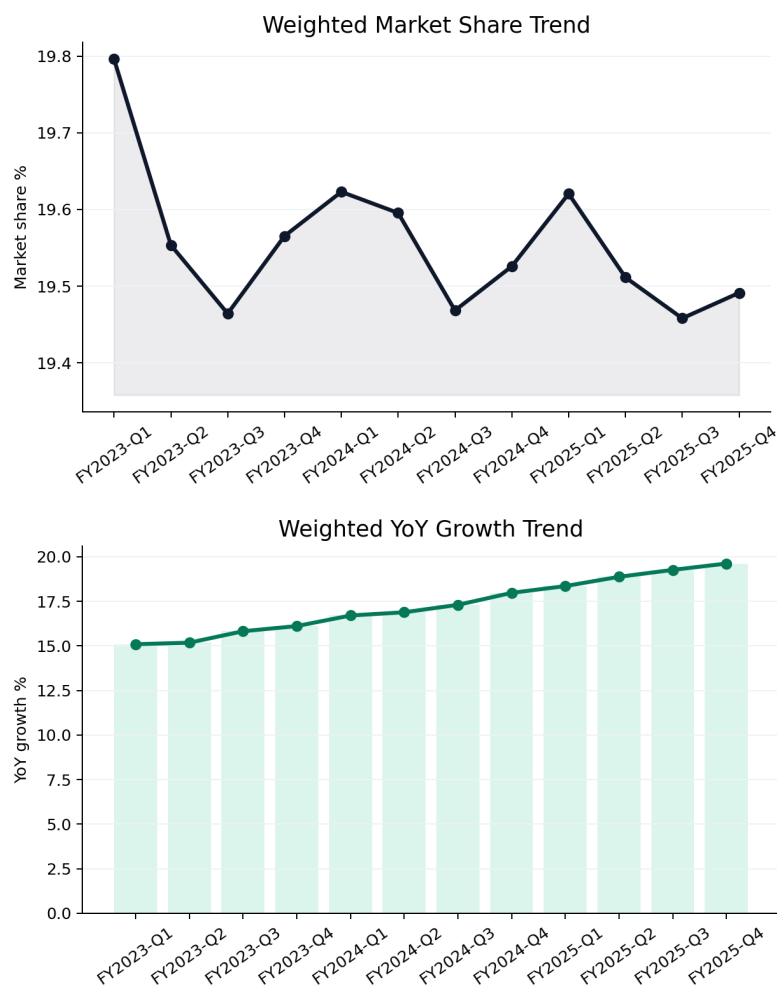

Revenue % vs Target converts the variance into a normalized attainment metric so geographies and quarters become comparable even when the revenue base differs.

Revenue % vs Target = $\text{DIVIDE}([\text{Revenue}], [\text{Revenue Target}])$

Worked example: $\text{€3.70B} \div \text{€6.08B} = \mathbf{60.8\%}$.

Interpretation: 100% means exactly on target, above 100% means over-delivery, below 100% means under-delivery. At 60.8%, the miss is too large to ignore and must be decomposed by brand and country.

3. Weighted Market Share and Weighted YoY Growth

The dataset stores market_share_pct and yoy_growth_pct at transaction level. The executive page uses revenue-weighted averages so large sales records contribute proportionally.

Weighted Market Share = $\text{DIVIDE}(\text{SUMX}(\text{FACT_Sales}, \text{FACT_Sales}[\text{market_share_pct}] * \text{FACT_Sales}[\text{net_revenue_eur}]), \text{SUM}(\text{FACT_Sales}[\text{net_revenue_eur}]))$

Weighted YoY Growth = $\text{DIVIDE}(\text{SUMX}(\text{FACT_Sales}, \text{FACT_Sales}[\text{yoy_growth_pct}] * \text{FACT_Sales}[\text{net_revenue_eur}]), \text{SUM}(\text{FACT_Sales}[\text{net_revenue_eur}]))$

Worked example: weighted market share = **19.49%**; weighted YoY growth = **19.62%**.

4. Executive KPI scorecard metrics

Executive KPI Scorecard | FY2025 Q4

	KPI Name	Value	Target	Attainment
KPI001	Field Day %	45.2	75.0	60%
KPI002	Target Coverage Rate	77.9	80.0	97%
KPI006	Digital Channel Coverage	51.2	50.0	102%
KPI008	Event Follow-up Rate	59.3	60.0	99%
KPI012	Interaction Frequency TC1	5.2	6.0	87%
KPI015	Multi-Channel Engagemer	2.3	7.5	31%

The executive scorecard uses six quarter-level KPIs from FACT_KPI_Summary. Each KPI is stored with a numerator, denominator, KPI value, and target value.

kpi_id	kpi_name	Value	Target	Attainment
KPI001	Field Day Percentage	45.2	75.0	60.2%
KPI002	Target Coverage Rate	77.9	80.0	97.4%
KPI006	Digital Channel Coverage	51.2	50.0	102.5%
KPI008	Event Follow-up Rate	59.3	60.0	98.9%
KPI012	Interaction Frequency TC1	5.2	6.0	86.8%
KPI015	Multi-Channel Engagement Score	2.3	7.5	30.6%

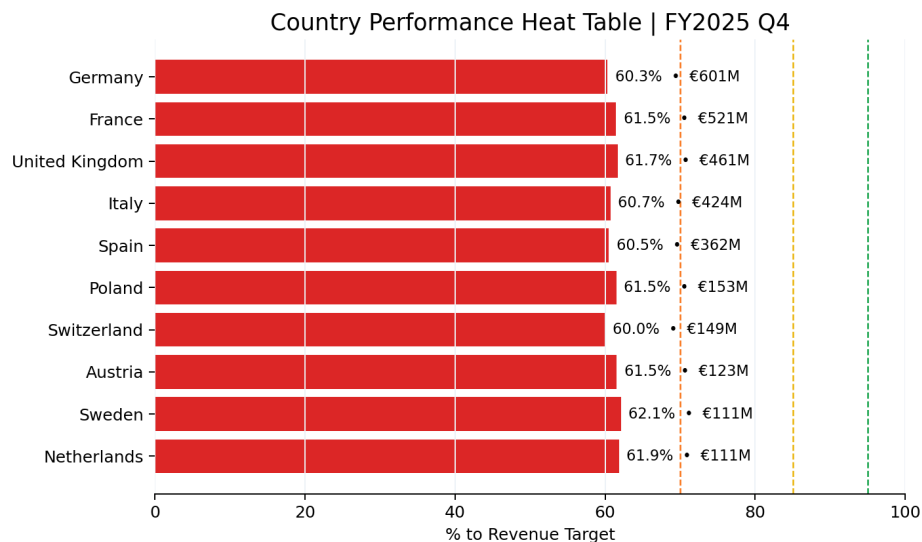

KPI Value = AVERAGE(FACT_KPI_Summary[kpi_value])

KPI Target = AVERAGE(FACT_KPI_Summary[target_value])

KPI % Attainment = DIVIDE([KPI Value], [KPI Target])

Status logic example: On Track when attainment is at least 100%; Watch between 90% and 99.9%; At Risk below 90%.

5. Country performance and percent to target

The country heat table is built from revenue actuals and revenue targets in the selected quarter. It answers which markets are both large and under target.

Country % to Target = $\text{DIVIDE}([\text{Revenue}], [\text{Revenue Target}])$

geo_name	country	Revenue	Target	% to Target
Germany	DE	€601.3M	€997.0M	60.3%
France	FR	€520.8M	€847.4M	61.5%
United Kingdom	GB	€461.1M	€747.7M	61.7%
Italy	IT	€423.8M	€697.9M	60.7%
Spain	ES	€361.9M	€598.2M	60.5%
Poland	PL	€153.2M	€249.2M	61.5%

Red should represent severe under-performance, orange moderate under-performance, amber watch, and green on-plan or above-plan. Always sort by revenue so that the highest-value markets appear first.

A country can show low % to target while still growing versus the prior year. That is why the executive page shows both attainment and growth.
